

TO CALIBRATE A HANDGUN:

1. Measure an area 18.5 feet by 18.5 feet in the target application area.
2. Spray the measured area uniformly with **water only** and record the number of seconds required to cover the area.
3. Measure the amount of water delivered to the test area by spraying into a container for the same amount of time.
4. The amount of water collected in fluid ounces equals spray volume in gallons per acre.

TO CALIBRATE A BROAD-JET SPRAYER:

Please see our website at www.scweeds.com/tools-and-resources

MOSQUITO LARVICIDING INFORMATION

BTI Briquets – 1 briquet treats a 10' x 10' area (100 square feet). The briquet will last 21 to 30 days then retreat.

Vectobac G – 40# bag will do 8 acres – use 5# per acre - .02# will treat 10' x 10' (100 square feet). Treatment will last up to 21 days.

The above recommendations of herbicide per acre are for non-crop land situations, such as pastures, range lands and fence ways.

You should always **READ THE LABEL** on any herbicide before applying, handling, storing or using. This precaution could save time and serious problems.

Proper mixing of herbicide requires you to fill the spray tank with half the amount of water you'll need, add the herbicide, and then finish filling the tank.

Should you have any questions concerning this information, please feel free to contact our office or visit our website.

MIXING INSTRUCTIONS

The following information is to assist you in mixing herbicides correctly for weed control on your property, (non-crop land situations). All rates are suggested rates and may vary depending on your sprayer calibration. **Please calibrate your sprayers and read product labels. Improper calibration of sprayers may result in a negative impact.**

HAND SPRAYERS FROM 1 GALLON TO 50 GALLON TANK

Chemical	Amount of chemical per gallon of water
2,4-D	1 ounce or 2 Tbsp
Banvel	1 ounce or 2 Tbsp
Escort	1 gram
Milestone	0.5 teaspoon
Prescott/Quali-2D	1 ounce or 2 Tbsp
Roundup	2.5 ounces or 5 Tbsp
Transline	2.5 teaspoons
Tordon 22K	1 ounce or 2 Tbsp
Vessel	1.5 ounces or 3 Tbsp
Weedmaster	1 ounce or 2 Tbsp
Wetting Agent	0.5 tsp until July, then increase to 1 tsp

***Do not use Wetting Agent on lawn!**

ALL RENTAL EQUIPMENT DELIVERS 20 GALLONS PER ACRE AT 40 PSI WHILE DRIVING 3 MPH

SMALL SPRAYERS – 65 Gallon Tank

BROAD-JETS:

Chemical	Amount of chemical per 20 gallons of water
2,4-D	1 quart or 2 pints or 4 cups
Banvel	1 quart or 2 pints or 4 cups
Escort	1 ounce or 2 Tbsp
